igneranddecryptorAndHighQualityGenerator for Weak Key. We need an independent researcher who has prior experience on health monitoring devices, using Bluetooth radio communication and developing protocols. We want to develop a security module for our products to enable a user to login to his/her device with a unique PIN and retrieve any information from the device, such as battery level and time, wifi connection, etc. The module must be very small, cost effective, and not interfere with the main functions of the device. The system must be capable of implementing a secure communication channel between the authentication device and the embedded device, with added features such as encryption algorithms and scrambling of data during transmission, etc. The application must be integrated into the firmware of the embedded device with no influence to its configuration or parameters. The expected result is a module that is not easy to reverse engineer, so it can not be reproduced or built without the whole embedded device. We need you to develop a prototype to validate our requirements. You will provide us with a source code for your prototype. () A project for developing modules for a final product, in which each module will be developed following the requirement specifications of the client. Project includes development of the software in C++, the development of PCB and assembling process. ...development and delivery of new graphics and video games. We are looking for graphics artists, programmers, and animators who can contribute their own unique styles to a growing AAA video game. We need a team of talented and creative individuals who can produce high-quality graphics and animation for a video game that has a world-class audience. We will work closely with you, the team members, to develop an exciting product Hi, We are working on online portal for the domestic market, where we need an expert to design and develop a user friendly frontend for the portal. User frontend experience is similar to that of [se connecter pour voir l'URL] We need a frontend with 3-4 pages with single login with the need for customization. Home page design is available and we need to make This project is for a hardware developer, who can design the hardware and develop the hardware and software. The software is available but the design has not been made. Hardware Requirements: 1. Include 82157476af
